

SPEED LATCH SYSTEM™

The chin bar can be quickly and easily removed or reattached thanks to the innovative Speed Latch™ mechanism.

ZOOM™ RAPID FIT SYSTEM

For a secure and comfortable fit: use the adjustment dial to fine-tune the helmet precisely to your head shape, down to the millimeter.

MIPS

The MIPS layer is an ultra-thin layer inside the helmet that reduces rotational forces in the event of a crash, providing additional protection when it matters most.

VARIO PADS

Adjust the cheek pads to three different positions. In full-face mode, they ensure a secure fit and comfort.

HALF SHELL OR FULL-FACE?

With the innovative Speed Latch System™, the choice is yours.

Without the chin bar, it's a lightweight, well-ventilated half-shell for climbs and tours. With the chin bar, it becomes a full-face for extra protection on demanding trails and in the bike park.

MODERN, NATURAL OR BOLD?

While Velvet Black appears clean and timeless and Sand Beige combines natural, earthy tones, Ash Purple delivers a modern look with violet and grey gradients. Lemon White adds brighter accents for a more eye-catching style.

CERTIFIED FOR YOUR RUNS

The Targon meets the ASTM F1952-22 standard, an additional test specifically designed for downhill helmets. It also holds EN 1078 certification for Europe and meets the CPSC standard for the U.S. and Canada. The MIPS version offers additional protection against rotational forces on technical trails and fast descents.

INNOVATION MEETS ITALIAN QUALITY

Made in Italy

The helmet is manufactured in our own production facility in Italy, representing high quality standards and precise, careful craftsmanship. It is the first mountain bike helmet in the “Made in Italy” series, combining premium manufacturing with innovative design.
